SUMMARY

Senior full stack engineer with 5 years of experience designing and shipping enterprise web, mobile, and backend platforms across React/Next.js, React Native, Node.js/NestJS, Python/FastAPI, and AWS — now applying that foundation to production AI/LLM integration. Currently building a multi-agent customer-operations platform (AWS Bedrock, MCP, RAG, tool calling) and independently built an AI code-review system to master retrieval, agent, and LLM-evaluation architectures in depth. Led frontend architecture for a multi-tenant POS platform deployed across hundreds of retail terminals; led and mentored a development team across full stack and AI workstreams.

SKILLS

Frontend & Mobile: React, Next.js, React Native, React Native Web, TypeScript, Redux Toolkit, Zustand, Tailwind CSS

Backend & APIs: Node.js, NestJS, FastAPI, Django, Go, Express, REST, WebSockets, SSE, Microservices (Molecular)

AI / LLM Integration: Multi-Agent Systems, MCP (Model Context Protocol), RAG, Tool Calling, Agent Orchestration, Vector Search (pgvector), AWS Bedrock, Strands Agents SDK, Google ADK, Langfuse, Anthropic / OpenAI / Gemini APIs, Prompt-Injection Defense, LLM Evaluation

Data & Infrastructure: PostgreSQL, MongoDB, Redis, DynamoDB, S3, Docker, AWS ECS, AWS Cognito, Azure AD SSO

DevOps & Quality: CI/CD (GitHub Actions, Bitbucket Pipelines), Datadog APM, Vitest, Pytest, Property-Based Testing, Observability

EXPERIENCE

Software Engineer — *Innovation Incubator Advisory, Trivandrum*

Jun 2025 – Present

- **Led a frontend re-architecture** to a registry-driven UI framework with Zustand, reducing duplicated screen code and accelerating delivery of new agent-driven workflows.
- **Established the platform's observability and security baseline** — Datadog APM distributed tracing, AWS Cognito + Azure AD SSO, and property-based test suites — across containerized AWS ECS deployments.
- **Contributed to a multi-tenant retail platform** supporting device sales, service activations, and customer onboarding across hundreds of terminals, with a shared cross-platform frontend codebase.

Full Stack Developer / Team Lead — *Elsys Intelligent Devices Pvt Ltd, Trivandrum*

Aug 2023 – May 2025

- **Led a team of developers** delivering frontend, backend, mobile, and AI-integrated product features end to end; ran code reviews and mentoring that raised engineering standards across the team.
- **Re-architected core application modules** to improve usability and overall user experience for staff and customer-facing workflows.
- **Built high-performance React applications** using memoization, code-splitting, and virtualized rendering for scalable, responsive component architectures.
- **Shipped cross-platform React Native applications** covering core product workflows for both iOS and Android.

Full Stack Developer — *JitTech Technology Services, Trivandrum*

Jul 2021 – Jul 2023

- **Built and maintained backend services** in Node.js/NestJS and Django powering production web applications with clean, API-driven architectures.
- **Implemented real-time communication features** — WebSockets and push-notification systems — for live, interactive product workflows.
- **Delivered Next.js web and React Native mobile applications end-to-end**, from API design through release.

KEY PROJECTS

AI Code Reviewer — *Personal Project* — *TypeScript, Next.js, PostgreSQL + pgvector, Anthropic API, Langfuse, Redis*

- **Independently designed and built** a ReAct-agent pull-request review platform as a self-directed deep study of production LLM engineering — hybrid retrieval (BM25 + vector search fused via Reciprocal Rank Fusion with reranking), AST-aware code indexing, contextual retrieval enhancement, and semantic caching for improved review relevance and reduced token cost.
- **Built end-to-end AI guardrails:** per-repo spend caps, prompt-injection defenses, sandboxed execution, and Langfuse-traced evaluation pipelines.

Enterprise Multi-Agent Customer Operations Platform — *Next.js, React, FastAPI, AWS Bedrock, Strands Agents SDK, FastMCP, AWS ECS*

- **Built a hierarchical multi-agent system** of six specialized agents with MCP-based tool orchestration, RAG, contextual memory, and enterprise-grade observability and security controls for enterprise customer-operations workflows.
- **Built real-time device-management workflows** using SSE-based telemetry orchestration with digital-twin visualizations for live fleet monitoring.

Enterprise Telecom POS Platform — *React Native Web, Redux Toolkit, Node.js, Moleculer, PostgreSQL, AWS*

- **Designed a single React Native Web codebase** powering both iPad and desktop retail terminals, eliminating duplicate platform-specific development across hundreds of terminals.
- **Designed scalable Redux Toolkit state management** for complex multi-step transactional flows (device sales, service activations, contracts) under real-world retail conditions.
- **Built Backend-for-Frontend services** (Node.js, Moleculer, PostgreSQL, AWS) with tenant-aware build/deployment pipelines for client-specific branding and feature enablement.
